| USUBJID       | Unique Subject Identifier   | 20  | text    | 60     |                            | Derived      | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

In a cut-data deliverable, RFPENDTC should be re-derived based on data present after data cut. RFPENDTC represents the last date of participation for subject for data included in submission. This is the last date of any record for subject in the database at the time it's locked for submission. In case of an interim cut-off, this date will not represent the end of study participation for ongoing subjects. All collected or derived dates in all datasets must be less than or equal to RFPENDTC. |

| DMDY                                                     | Study Day of Collection   |     | integer  | 8      |                            | Derived    | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID               | Unique Subject Identifier           | 20  | text    | 60     |                                                                             | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

They are determined by comparing the date portion of the respective date/time variable --ENDTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --ENDTC or RFSTDTC date is incomplete, --ENDY is null. |

| USUBJID            | Unique Subject Identifier  | 20  | text    | 60     |                                                                  | Derived         | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| USUBJID             | Unique Subject Identifier           | 20  | text    | 60     |                                    | Derived      | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| USUBJID                  | Unique Subject Identifier       | 20  | text     | 60     |                                                                             | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| USUBJID              | Unique Subject Identifier             | 20  | text    | 60     |                            | Derived             | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| MHSTDY               | Study Day of Start of History Event      |     | integer          | 8      |                                                                                      | Derived             | The study day variable --STDY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --STDTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --STDTC or RFSTDTC date is incomplete, --STDY is null. |

| USUBJID                                   | Unique Subject Identifier | 20  | text | 60     |                            | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| IEDY                                      | Study Day of Collection                  |     | integer  | 8      |                                                                             | Derived    | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID                      | Unique Subject Identifier           | 20  | text    | 60     |                            | Derived                                             | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| LBDY                                                     | Study Day of Specimen Collection        |     | integer  | 8      |                            | Derived                                    | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null.         |
| LBENDY                                                   | Study Day of End of Specimen Collection |     | integer  | 8      |                            | Derived                                    | The study day variable --ENDY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --ENDTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --ENDTC or RFSTDTC date is incomplete, --ENDY is null. |

| USUBJID                    | Unique Subject Identifier | 20  | text | 60     |                            | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| MBDY                       | Study Day of Visit/ Collection/Exam |     | integer  | 8      |                                                                                         | Derived     | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID                   | Unique Subject Identifier | 20  | text | 60     |                            | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| MIDY                                                     | Study Day of Specimen Collection |     | integer  | 8      |                                                                             | Derived  | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID         | Unique Subject Identifier | 20  | text    | 60     |                            | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| MODY                                                     | Study Day of Test |     | integer  | 8      |                            | Derived            | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| VSDY             | Study Day of Vital Signs                 |     | integer  | 8      |                                                          | Derived         | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID            | Unique Subject Identifier       | 20  | text    | 60     |                                                                   | Derived  | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| ZRDY               | Study Day of Randomization                   |     | integer  | 8      |                                                                                      | Derived  | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| FADY                                                     | Study Day of Collection  |     | integer          | 8      |                            | Derived                      | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| SRDY               | Study Day of Visit/Collection/Exam |     | integer  | 8      |                            | Derived            | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null. |

| USUBJID                                 | Unique Subject Identifier   | 30  | text | 60     |                                                                       | Derived      | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study. |

| 2 to < 18 years of age, inclusive(at the time of the first administration of study intervention at Week I-0) with a body weight >=10 kg.                                                          |  |
| A child of an employee or child who is a first-degree relative of an employee, or a child of the investigator who has direct involvement in the proposed study, as well as the children of family |  |

| Inclusion/Exclusion Test Name [CL.IETEST]                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                                                                                                                                                                                             |
| A participant who has had extensive colitis for $\geq 8$ years, or disease limited to the left side of the colon for $\geq 10$ years, must: a. Have had a full colonoscopy to assess for the presence of dysplasia |
| A past history of or current nontuberculous mycobacterial infection or clinically significant opportunistic infection (eg, pneumocystosis, invasive aspergillosis, progressive multifocal                          |
| Are considered eligible according to the following tuberculosis (TB) screening criteria: a. Have no history of latent or active TB prior to screening b. Have no signs or symptoms suggestive of active            |
| Are pregnant, nursing, or planning pregnancy or fathering a child.                                                                                                                                                 |
| Are pregnant, nursing, or planning pregnancy while enrolled in this study or within 16 weeks after the last dose of study intervention.                                                                            |
| Before randomization, a female must be either: a. Not of childbearing potential b. Of childbearing potential and Not sexually active, practicing abstinence or a highly effective method of contraception          |
| During the 6 weeks prior to baseline, have had ANY of (a) confirmed SARS-CoV-2 (COVID-19) infection (test positive), OR (b) suspected SARS-CoV-2 infection (clinical features without documented test              |
| During the 6 weeks prior to first administration of study intervention, have had ANY of the following (regardless of vaccination status): (a) confirmed SARS-CoV-2 (COVID-19) infection (test positive),           |
| During the study and for a minimum of 16 weeks after receiving the last dose of study intervention, a male: a. Who is sexually active with a female of childbearing potential must agree to use a                  |
| Females of childbearing potential must agree not to donate eggs (ova, oocytes) or freeze for future use for the purposes of assisted reproduction during the study and for a minimum of 16 weeks after             |
| Females of childbearing potential must have a negative highly sensitive urine pregnancy test at screening and at Week I-0 prior to study intervention administration.                                              |
| Females of childbearing potential must have a negative highly sensitive serum pregnancy test (beta-human chorionic gonadotropin) at screening, and then have a negative urine pregnancy test at Week I-0           |
| Females of childbearing potential must have a negative urine pregnancy test at screening and at Week I-0 prior to study intervention administration.                                                               |
| Has a history of drug or alcohol abuse according to the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-V), within 1 year before screening.                                                |
| Has a serious allergic reaction to latex.                                                                                                                                                                          |
| Has any condition for which, in the opinion of the investigator, participation would not be in the best interest of the participant (eg, compromise the well-being) or that could prevent, limit, or               |
| Has known allergies, hypersensitivity, or intolerance to ustekinumab or its excipients (refer to current IB).                                                                                                      |
| Have UC limited to the rectum only or to $< 20$ cm of the colon.                                                                                                                                                   |
| Have a HBV infection. Participants must undergo screening for HBV (Appendix 15 [Section 10.15]). At a minimum, this includes testing for HBsAg (HBV surface antigen), anti-HBs (HBV surface antibody),             |
| Have a chest radiograph during screening or 6 months prior to the first administration of study intervention that shows an abnormality suggestive of an undiagnosed pulmonary pathology that may include           |
| Have a history of latent or active granulomatous infection, histoplasmosis, or coccidioidomycosis, or have had a nontuberculous mycobacterial infection prior to screening.                                        |
| Have a history of latent or active granulomatous infection, including TB, histoplasmosis, or coccidioidomycosis, or have had a nontuberculous mycobacterial infection prior to screening.                          |
| Have a history of moderate or severe progressive or uncontrolled liver or renal insufficiency; or significant cardiac, vascular, pulmonary, GI, endocrine, neurologic, hematologic, psychiatric                    |
| Have a history of, or ongoing, chronic or recurrent infectious disease, including but not limited to, chronic renal infection, chronic chest infection (eg, bronchiectasis), sinusitis, recurrent                  |
| Have a known history of HCV infection or test positive at screening.                                                                                                                                               |

| Inclusion/Exclusion Test Name [CL.IETEST]                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                                                                                                                                                                                                                               |
| Have a known history of infection with HIV or test positive at screening.                                                                                                                                                                            |
| Have a transplanted organ (with the exception of a corneal transplant performed >3months prior to first administration of study intervention).                                                                                                       |
| Have clinically significant immune deficiency syndrome (eg, severe combined immunodeficiency syndrome, T-cell deficiency syndromes, B-cell deficiency syndromes, or chronic granulomatous disease) and/                                              |
| Have evidence of Crohns disease: a. Small intestinal or ileal disease by upper GI small bowel follow-through, ileocolonoscopy with histology, videocapsule endoscopy, or magnetic resonance enterography                                             |
| Have evidence of herpes zoster infection within 8 weeks prior to Week I-0.                                                                                                                                                                           |
| Have had 2 indeterminate (indeterminate on repeat sampling) QuantiFERON-TB (or T-Spot) test results. Indeterminate results should be handled as outlined in Section 8.3.6.1.                                                                         |
| Have had a Bacille Calmette-Guerin vaccination within 12 months of screening.                                                                                                                                                                        |
| Have had a medical history of nontuberculous mycobacterial infection or opportunistic infection (eg, cytomegalovirus colitis, Pneumocystis carinii, aspergillosis) at any time.                                                                      |
| Have had a serious infection (eg, hepatitis, pneumonia, or pyelonephritis), have been hospitalized for an infection, or have been treated with parenteral antibiotics for an infection within 2 months                                               |
| Have moderately to severely active UC, defined as a baseline Mayo score of 6 through 12, inclusive, with a screening Mayo endoscopy subscore $\geq 2$ as determined by a central review of the video of the                                          |
| Have negative stool results for enteric pathogens. Stool studies must include a stool culture and Clostridioides difficile (formerly known as Clostridium difficile) toxin assay (C. difficile toxin/                                                |
| Have negative stool results for enteric pathogens. Stool studies must include a stool culture and Clostridium difficile toxin assay (C. difficile toxin/GDH with Reflex to polymerase chain                                                          |
| Have poor tolerability of venipuncture or lack of adequate venous access for required blood sampling.                                                                                                                                                |
| Have received the following concomitant or previous medical therapies within the specified period: a. Has ever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not                                               |
| Have received the following concomitant or previous medical therapies within the specified period: a. Has ever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not                                               |
| Have received the following concomitant or previous medical therapies: a. Has ever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not limited to briakinumab,                                                   |
| Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention, during the study, or within 15 weeks after                                                |
| Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention.                                                                                           |
| Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention. Receipt of a live SARS-CoV-2 vaccine (against                                             |
| Have screening laboratory test result as follows: a. Hemoglobin $\geq 8.0$ g/dL b. White blood cells $\geq 2.5 \times 10^3$ cells/uL (SI: $\geq 2.5 \times 10^9$ cells/L) c. Neutrophils $\geq 1.5 \times 10^3$ cells/uL (SI: $\geq 1.5 \times 10^9$ |
| Have severe, extensive colitis as evidenced by: a. Investigator judgment that the participant is likely to require a colectomy within 12 weeks of Week I-0. OR b. Symptom complex at screening or Week I                                             |
| Have severe, fixed symptomatic stenosis of the large or small intestine.                                                                                                                                                                             |
| History of extensive colonic resection (eg, less than 30 cm of colon remaining) that would prevent adequate evaluation of the effect of study intervention on clinical disease activity.                                                             |
| If live, attenuated viral vaccine is utilized for any study participants, it is necessary for at least 4 weeks (or longer as indicated on the package insert of the relevant vaccine) to elapse between                                              |
| If previously receiving enteral nutrition providing more than 80% of daily caloric needs, therapy must have been stopped for at least 4 weeks prior to Week I-0.                                                                                     |

| Inclusion/Exclusion Test Name [CL.IETEST]                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                                                                                                                                                                                     |
| Is a child of an employee or child who is a first-degree relative of an employee, child of the investigator who has direct involvement in the proposed study or other studies under the direction of       |
| Is currently undergoing or has previously undergone allergy immunotherapy for a history of anaphylactic reactions.                                                                                         |
| Medically stable on the basis of clinical laboratory tests performed at screening. If the results of the serum chemistry panel including liver enzymes, other specific tests, blood coagulation, or        |
| Medically stable on the basis of clinical laboratory tests performed at screening. If the results of the serum chemistry panel including liver enzymes, other specific tests, or hematology are outside    |
| Medically stable on the basis of physical examination, medical history, and vital signs, performed at screening. Any abnormalities must be consistent with the underlying illness in the study             |
| Meet ANY of the following tuberculosis (TB) screening criteria: Note: Interferon gamma release assay (IGRA) testing includes either QuantiFERON-TB or T-SPOT.TB. a. Have a history of active TB or         |
| Must be willing and able to adhere to the lifestyle restrictions specified in this protocol.                                                                                                               |
| Must have biopsy confirmation that is consistent with a diagnosis of UC (eg, crypt distortion, crypt abscess, and goblet cell depletion).                                                                  |
| Must have had UC diagnosed for at least 1 month prior to screening.                                                                                                                                        |
| Must have had UC diagnosed prior to screening.                                                                                                                                                             |
| Must meet concomitant medication criteria prior to the first administration of study intervention: Corticosteroids a. If receiving budesonide or beclomethasone dipropionate, the dose must have been      |
| Parent(s) (preferably both if available or as per local requirements), legal guardian(s) or their legally acceptable representative must sign an ICF indicating that he or she understands the purpose     |
| Participants must be up to date with varicella and measles, mumps, and rubella in agreement with current local immunization guidelines for immunosuppressed participants before Week I-0. Note: For        |
| Participants must have acceptable evidence of immunity to varicella and measles, mumps, and rubella, which includes any one of the following:<br>a. Healthcare provider (HCP) documentation of vaccination |
| Plans to father a child while enrolled in this study or within 16 weeks after the last dose of study intervention. NOTE: Investigators should ensure that all available study enrollment criteria have     |
| Presence of a stoma.                                                                                                                                                                                       |
| Presence on screening endoscopy of adenomatous colonic polyps, if not removed prior to study entry, or history of adenomatous colonic polyps that were not removed.                                        |
| Presence or history of a fistula.                                                                                                                                                                          |
| Presence or history of any malignancy including presence or history of lymphoproliferative disease including lymphoma, or signs and symptoms suggestive of possible lymphoproliferative disease, such as   |
| Presence or history of colonic or small bowel obstruction within 6 months prior to screening, confirmed by objective radiographic or endoscopic evidence of a stricture with resulting obstruction         |
| Prior or current medication for UC must include one of the following: Have received biologic therapy (ie, TNF alpha antagonist or vedolizumab) for the treatment of pediatric UC (Appendix 3 [Section      |
| Received an investigational intervention including any investigational vaccines or used an invasive investigational medical device within 3 months before the planned first dose of study intervention     |
| Require, or required within the 2 months prior to screening, surgery for active GI bleeding, peritonitis, intestinal obstruction, or intra-abdominal or pancreatic abscess requiring surgical drainage,    |

| Inclusion/Exclusion Test Code [CL.IETESTCD] |                                                                                                                                                                                                          |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                      | Display Value (Decode)                                                                                                                                                                                   |
| EX01                                        | Have severe, extensive colitis as evidenced by: a. Investigator judgment that the participant is likely to require a colectomy within 12 weeks of Week I-0. OR b. Symptom complex at screening or Week I |
| EX02                                        | Have UC limited to the rectum only or to <20 cm of the colon.                                                                                                                                            |
| EX03                                        | Presence of a stoma.                                                                                                                                                                                     |
| EX04                                        | Presence or history of a fistula.                                                                                                                                                                        |
| EX05                                        | Have severe, fixed symptomatic stenosis of the large or small intestine.                                                                                                                                 |
| EX06                                        | Require, or required within the 2 months prior to screening, surgery for active GI bleeding, peritonitis, intestinal obstruction, or intra-abdominal or pancreatic abscess requiring surgical drainage,  |
| EX07                                        | Presence or history of colonic or small bowel obstruction within 6 months prior to screening, confirmed by objective radiographic or endoscopic evidence of a stricture with resulting obstruction       |
| EX08                                        | History of extensive colonic resection (eg, less than 30 cm of colon remaining) that would prevent adequate evaluation of the effect of study intervention on clinical disease activity.                 |
| EX09                                        | Presence on screening endoscopy of adenomatous colonic polyps, if not removed prior to study entry, or history of adenomatous colonic polyps that were not removed.                                      |
| EX10                                        | Have evidence of Crohns disease: a. Small intestinal or ileal disease by upper GI small bowel follow-through, ileocolonoscopy with histology, videocapsule endoscopy, or magnetic resonance enterography |
| EX11                                        | Have received the following concomitant or previous medical therapies: a. Hasever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not limited to briakinumab,        |
| EX11_1                                      | Have received the following concomitant or previous medical therapies within the specified period: a. Has ever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not   |
| EX11_2                                      | Have received the following concomitant or previous medical therapies within the specified period: a.Has ever received ustekinumab or a biologic agent targeting IL-12/23 or IL-23, including but not    |
| EX12                                        | Have a history of latent or active granulomatous infection, including TB, histoplasmosis, or coccidioidomycosis, or have had a nontuberculous mycobacterial infection prior to screening.                |
| EX12_1                                      | Have a history of latent or active granulomatous infection, histoplasmosis, or coccidioidomycosis, or have had a nontuberculous mycobacterial infection prior to screening.                              |
| EX13                                        | Have a history of, or ongoing, chronic or recurrent infectious disease, including but not limited to, chronic renal infection, chronic chest infection (eg, bronchiectasis), sinusitis, recurrent        |
| EX14                                        | Have clinically significant immune deficiency syndrome (eg, severe combined immunodeficiency syndrome, T-cell deficiency syndromes, B-cell deficiency syndromes, or chronic granulomatous disease) and/  |
| EX15                                        | Have a known history of infection with HIV or test positive at screening.                                                                                                                                |
| EX16                                        | Have evidence of herpes zoster infection within 8 weeks prior to Week I-0.                                                                                                                               |

| Inclusion/Exclusion Test Code [CL.IETESTCD] |                                                                                                                                                                                                          |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                      | Display Value (Decode)                                                                                                                                                                                   |
| EX17                                        | Have a known history of HCV infection or test positive at screening.                                                                                                                                     |
| EX18                                        | Have a HBV infection. Participants must undergo screening for HBV (Appendix 15 [Section 10.15]). At a minimum, this includes testing for HBsAg (HBV surface antigen), anti-HBs (HBV surface antibody),   |
| EX19                                        | Have had a Bacille Calmette-Guerin vaccination within 12 months of screening.                                                                                                                            |
| EX20                                        | Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention, during the study, or within 15 weeks after    |
| EX20_1                                      | Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention. Receipt of a live SARS-CoV-2 vaccine (against |
| EX20_2                                      | Have received, or are expected to receive, any live virus or bacterial vaccination within 4 weeks prior to the first administration of study intervention.                                               |
| EX21                                        | Have had a medical history of nontuberculous mycobacterial infection or opportunistic infection (eg, cytomegalovirus colitis, Pneumocystis carinii, aspergillosis) at any time.                          |
| EX21_1                                      | A past history of or current nontuberculous mycobacterial infection or clinically significant opportunistic infection (eg, pneumocystosis, invasive aspergillosis, progressive multifocal                |
| EX22                                        | Have had 2 indeterminate (indeterminate on repeat sampling) QuantiFERON-TB (or T-Spot) test results. Indeterminate results should be handled as outlined in Section 8.3.6.1.                             |
| EX22_1                                      | Meet ANY of the following tuberculosis (TB) screening criteria:<br>Note: Interferon gamma release assay (IGRA) testing includes either QuantiFERON-TB or T-SPOT.TB. a. Have a history of active TB or    |
| EX23                                        | Have a chest radiograph during screening or 6 months prior to the first administration of study intervention that shows an abnormality suggestive of an undiagnosed pulmonary pathology that may include |
| EX23_1                                      | Have a chest radiograph during screening or 6 months prior to the first administration of study intervention that shows an abnormality suggestive of an undiagnosed pulmonary pathology that may include |
| EX24                                        | Have had a serious infection (eg, hepatitis, pneumonia, or pyelonephritis), have been hospitalized for an infection, or have been treated with parenteral antibiotics for an infection within 2 months   |
| EX25                                        | Presence or history of any malignancy including presence or history of lymphoproliferative disease including lymphoma, or signs and symptoms suggestive of possible lymphoproliferative disease, such as |
| EX26                                        | Have a history of moderate or severe progressive or uncontrolled liver or renal insufficiency; or significant cardiac, vascular, pulmonary, GI, endocrine, neurologic, hematologic, psychiatric          |
| EX27                                        | Is currently undergoing or has previously undergone allergy immunotherapy for a history of anaphylactic reactions.                                                                                       |
| EX28                                        | Has known allergies, hypersensitivity, or intolerance to ustekinumab or its excipients (refer to current IB).                                                                                            |
| EX29                                        | Have poor tolerability of venipuncture or lack of adequate venous access for required blood sampling.                                                                                                    |

| Inclusion/Exclusion Test Code [CL.IETESTCD] |                                                                                                                                                                                                          |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Permitted Value (Code)                      | Display Value (Decode)                                                                                                                                                                                   |
| EX30                                        | Has a serious allergic reaction to latex.                                                                                                                                                                |
| EX31                                        | Have a transplanted organ (with the exception of a corneal transplant performed >3months prior to first administration of study intervention).                                                           |
| EX32                                        | Has any condition for which, in the opinion of the investigator, participation would not be in the best interest of the participant (eg, compromise the well-being) or that could prevent, limit, or     |
| EX33                                        | Has a history of drug or alcohol abuse according to the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-V), within 1 year before screening.                                      |
| EX34                                        | Received an investigational intervention including any investigational vaccines or used an invasive investigational medical device within 3 months before the planned first dose of study intervention   |
| EX34_1                                      | Received an investigational intervention including any investigational vaccines or used an invasive investigational medical device within 3 months before the planned first dose of study intervention   |
| EX35                                        | Are pregnant, nursing, or planning pregnancy or fathering a child.                                                                                                                                       |
| EX35_1                                      | Are pregnant, nursing, or planning pregnancy while enrolled in this study or within 16 weeks after the last dose of study intervention.                                                                  |
| EX36                                        | Is a child of an employee or child who is a first-degree relative of an employee, child of the investigator who has direct involvement in the proposed study or other studies under the direction of     |
| EX36_1                                      | A child of an employee or child who is a first-degree relative of an employee, or a child of the investigator who has direct involvement in the proposed study, as well as the children of family        |
| EX37                                        | During the 6 weeks prior to baseline, have had ANY of (a) confirmed SARS-CoV-2 (COVID-19) infection (test positive), OR (b) suspected SARS-CoV-2 infection (clinical features without documented test    |
| EX37_1                                      | During the 6 weeks prior to first administration of study intervention, have had ANY of the following (regardless of vaccination status): (a) confirmed SARS-CoV-2 (COVID-19) infection (test positive), |
| EX38                                        | Plans to father a child while enrolled in this study or within 16 weeks after the last dose of study intervention. NOTE: Investigators should ensure that all available study enrollment criteria have   |
| IN01                                        | 2 to < 18 years of age, inclusive(at the time of the first administration of study intervention at Week I-0) with a body weight >=10 kg.                                                                 |
| IN02                                        | Medically stable on the basis of physical examination, medical history, and vital signs, performed at screening. Any abnormalities must be consistent with the underlying illness in the study           |
| IN03                                        | Medically stable on the basis of clinical laboratory tests performed at screening. If the results of the serum chemistry panel including liver enzymes, other specific tests, blood coagulation, or      |
| IN03_1                                      | Medically stable on the basis of clinical laboratory tests performed at screening. If the results of the serum chemistry panel including liver enzymes, other specific tests, or hematology are outside  |
| IN04                                        | Must have had UC diagnosed for at least 1 month prior to screening.                                                                                                                                      |

| Unit [CL.UNIT , C71620]   |                             |
|---------------------------|-----------------------------|
| Permitted Value (Code)    | Display Value (Decode)      |
| % [C25613]                | Percentage                  |
| % INHIBITION [C117963]    | Percent Inhibition          |
| %(v/v) [C48571]           | Percent Volume per Volume   |
| %(w/v) [C48527]           | Percent Mass per Volume     |
| %(w/w) [C48528]           | Percent Mass per Mass       |
| %/min [C114240]           | Percent per Minute          |
| %/s [C163560]             | Percent per Second          |
| (pmol/min/m2)/(mg/dL) [*] | (pmol/min/m2)/(mg/dL)       |
| /100 HPFs [C102695]       | Per 100 High Powered Fields |
| /100 WBC [C67219]         | Per 100 White Blood Cells   |
| /10^3 [C123634]           | Per Thousand                |
| /10^4 [C135515]           | Per Ten Thousand            |
| /10^4 cells [*]           | /10^4 cells                 |
| /10^5 [C135516]           | Per Hundred Thousand        |
| /10^5 cells [*]           | /10^5 cells                 |

| Unit [CL.UNIT , C71620] |                                        |
|-------------------------|----------------------------------------|
| Permitted Value (Code)  | Display Value (Decode)                 |
| /10^6 cells [*]         | /10^6 cells                            |
| /200 HPFs [C132472]     | Per 200 High Powered Fields            |
| /2000 RBC [C132473]     | Per 2000 Red Blood Cells               |
| /2500 WBC [C132474]     | Per 2500 White Blood Cells             |
| /4.0 mL [C122197]       | per 4.0 Milliliters                    |
| /40 HPFs [C132475]      | Per 40 High Powered Fields             |
| /5 HPF [*]              | Per 5 High Powered Fields              |
| /500 WBC [C132476]      | Per 500 White Blood Cells              |
| /5x10^4 WBC [C170636]   | /5x10^4 WBC                            |
| /7.5 mL [C122198]       | per 7.5 Milliliters                    |
| /HPF [C96619]           | Per High Powered Field                 |
| /LPF [C96620]           | Per Low Powered Field                  |
| /LSQN [C130187]         | Per Large Square Neubauer Chamber      |
| /VF [C105516]           | Per Visual Field                       |
| /cmH2O [C135517]        | Per Centimeter of Water                |
| /day [C25473]           | Daily                                  |
| /h [C66966]             | Per Hour                               |
| /kg [C120844]           | Per Kilogram                           |
| /min [C66967]           | Per Minute                             |
| /mm [C130188]           | Per Millimeter                         |
| /mm2 [C122199]          | per Square Millimeter                  |
| /mm3 [*]                | per cubic Millimeter                   |
| /month [C64498]         | Monthly                                |
| /ms [C161490]           | Per Millisecond                        |
| /pL [*]                 | /pL                                    |
| /sec [C66965]           | Per Second                             |
| /uL [*]                 | /uL                                    |
| /wk [C67069]            | Weekly                                 |
| 1/(s*kPa) [C127804]     | One per Second Times Kilopascal        |
| 100 IU/mL [C71185]      | 100 International Units per Milliliter |
| 10^-4/min(uU/mL) [*]    | 10^-4/min(uU/mL)                       |
| 10^1 IU/mL [*]          | 10^1 IU/mL                             |
| 10^1 copies/mL [*]      | 10^1 copies/mL                         |
| 10^10 IU/mL [*]         | 10^10 IU/mL                            |
| 10^10 copies/mL [*]     | 10^10 copies/mL                        |
| 10^10/L [C105517]       | Ten Billion Per Liter                  |
| 10^11/L [C105488]       | Hundred Billion Per Liter              |
| 10^12 IU/L [C105518]    | Tera International Unit Per Liter      |

| Unit [CL.UNIT , C71620]                |                                                                       |
|----------------------------------------|-----------------------------------------------------------------------|
| Permitted Value (Code)                 | Display Value (Decode)                                                |
| 10 <sup>12</sup> /L [C67308]           | Million per Microliter                                                |
| 10 <sup>2</sup> IU/mL [*]              | 10 <sup>2</sup> IU/mL                                                 |
| 10 <sup>2</sup> copies/mL [*]          | 10 <sup>2</sup> copies/mL                                             |
| 10 <sup>3</sup> CFU [C68895]           | Thousand Colony Forming Units                                         |
| 10 <sup>3</sup> CFU/g [C68899]         | Thousand Colony Forming Units per Gram                                |
| 10 <sup>3</sup> CFU/mL [C68903]        | Thousand Colony Forming Units per Milliliter                          |
| 10 <sup>3</sup> DNA copies/mL [C98788] | Thousand DNA Copies per Milliliter                                    |
| 10 <sup>3</sup> Enzyme U/L [*]         | 10 <sup>3</sup> Enzyme U/L                                            |
| 10 <sup>3</sup> IU/mL [*]              | 10 <sup>3</sup> IU/mL                                                 |
| 10 <sup>3</sup> RNA copies/mL [C98790] | Thousand RNA Copies per Milliliter                                    |
| 10 <sup>3</sup> copies/mL [C100897]    | Thousand Copies per Milliliter                                        |
| 10 <sup>3</sup> organisms [C71187]     | Thousand Organisms                                                    |
| 10 <sup>3</sup> organisms/g [C71190]   | Thousand Organisms per Gram                                           |
| 10 <sup>3</sup> organisms/mL [C71195]  | Thousand Organisms per Milliliter                                     |
| 10 <sup>3</sup> /L [C105519]           | Thousand Per Liter                                                    |
| 10 <sup>3</sup> /hpf [C98789]          | Thousand per High Powered Field                                       |
| 10 <sup>4</sup> CFU [C158293]          | Ten Thousand Colony Forming Units                                     |
| 10 <sup>4</sup> CFU/mL [C166095]       | Ten Thousand CFU/mL; Ten Thousand Colony Forming Units per Milliliter |
| 10 <sup>4</sup> IU/mL [*]              | 10 <sup>4</sup> IU/mL                                                 |
| 10 <sup>4</sup> copies/mL [*]          | 10 <sup>4</sup> copies/mL                                             |
| 10 <sup>4</sup> /L [C73771]            | Thousand per Deciliter                                                |
| 10 <sup>4</sup> /hpf [C98787]          | Ten Thousand per High Powered Field                                   |
| 10 <sup>5</sup> IU/mL [*]              | 10 <sup>5</sup> IU/mL                                                 |
| 10 <sup>5</sup> copies/mL [*]          | 10 <sup>5</sup> copies/mL                                             |
| 10 <sup>5</sup> /L [C105490]           | Hundred Thousand Per Liter                                            |
| 10 <sup>5</sup> /hpf [C98743]          | Hundred Thousand per High Powered Field                               |
| 10 <sup>6</sup> CFU [C68896]           | Million Colony Forming Units                                          |
| 10 <sup>6</sup> CFU/g [C68900]         | Million Colony Forming Units per Gram                                 |
| 10 <sup>6</sup> CFU/mL [C68904]        | Million Colony Forming Units per Milliliter                           |
| 10 <sup>6</sup> DNA copies/mL [C98756] | Million DNA Copies per Milliliter                                     |
| 10 <sup>6</sup> IU [C67335]            | Million International Units                                           |
| 10 <sup>6</sup> IU/mL [C98757]         | Million International Units per Milliliter                            |
| 10 <sup>6</sup> RNA copies/mL [C98760] | Million RNA Copies per Milliliter                                     |
| 10 <sup>6</sup> U [C67310]             | Million Units                                                         |
| 10 <sup>6</sup> copies/mL [C100898]    | Million Copies per Milliliter                                         |
| 10 <sup>6</sup> organisms [C71188]     | Million Organisms                                                     |
| 10 <sup>6</sup> organisms/g [C71191]   | Million Organisms per Gram                                            |

| Unit [CL.UNIT , C71620]    |                                                                     |
|----------------------------|---------------------------------------------------------------------|
| Permitted Value (Code)     | Display Value (Decode)                                              |
| 10^6 organisms/mL [C71196] | Million Organisms per Milliliter                                    |
| 10^6 organisms/mg [C71193] | Million Organisms per Milligram                                     |
| 10^6/Ejaculate U [C130189] | Million Per Ejaculate Unit                                          |
| 10^6/L [C67452]            | Thousand per Milliliter                                             |
| 10^6/g [C98758]            | Million per Gram                                                    |
| 10^6/hpf [C98759]          | Million per High Powered Field                                      |
| 10^7 CFU [C158294]         | Ten Million Colony Forming Units                                    |
| 10^7 CFU/mL [C166096]      | Ten Million CFU/mL; Ten Million Colony Forming Units per Milliliter |
| 10^7 IU/mL [*]             | 10^7 IU/mL                                                          |
| 10^7 PFU [C67265]          | 10^7 PFU                                                            |
| 10^7 copies/mL [*]         | 10^7 copies/mL                                                      |
| 10^7/L [C98786]            | Ten Million per Liter                                               |
| 10^8 IU/mL [*]             | 10^8 IU/mL                                                          |
| 10^8 PFU [C67266]          | 10^8 PFU                                                            |
| 10^8 copies/mL [*]         | 10^8 copies/mL                                                      |
| 10^8/L [C105489]           | Hundred Million Per Liter                                           |
| 10^9 CFU [C68897]          | Billion Colony Forming Units                                        |
| 10^9 CFU/g [C68901]        | Billion Colony Forming Units per Gram                               |
| 10^9 CFU/mL [C68905]       | Billion Colony Forming Units per Milliliter                         |
| 10^9 IU/mL [*]             | 10^9 IU/mL                                                          |
| 10^9 copies/mL [*]         | 10^9 copies/mL                                                      |
| 10^9 organisms [C71189]    | Billion Organisms                                                   |
| 10^9 organisms/g [C71192]  | Billion Organisms per Gram                                          |
| 10^9 organisms/mL [C71197] | Billion Organisms per Milliliter                                    |
| 10^9 organisms/mg [C71194] | Billion Organisms per Milligram                                     |
| 10^9/L [C67255]            | Billion per Liter                                                   |
| 10^9/dose [C163561]        | 10^9/dose                                                           |
| 10^9/g [C122200]           | Billion per Gram                                                    |
| ABC/cell [*]               | ABC/cell                                                            |
| AFU [C77534]               | Arbitrary Fluorescence Units                                        |

| mL/cm H2O [C98755]      | Milliliter per Centimeter of Water                         |
| mL/cm3/min [C163564]    | mL/mL/min                                                  |
| mL/dL [C105504]         | Milliliter per Deciliter                                   |
| mL/day [C67410]         | Milliliter per 24 Hours                                    |
| mL/dose [C124459]       | Milliliter per Dose                                        |
| mL/g/day [C73755]       | Milliliter per Gram per Day                                |
| mL/g/h [C73756]         | Milliliter per Gram per Hour                               |
| mL/g/min [C73757]       | Milliliter per Gram per Minute                             |
| mL/h [C66962]           | Milliliter per Hour                                        |
| mL/kg [C67411]          | Milliliter per Kilogram                                    |
| mL/kg/day [C73758]      | Milliliter per Kilogram per Day                            |
| mL/kg/h [C73759]        | Milliliter per Kilogram per Hour                           |
| mL/kg/min [C73760]      | Milliliter per Kilogram per Minute                         |
| mL/m2 [C73761]          | Milliliter per Square Meter                                |
| mL/m2/day [C66977]      | Milliliter per Square Meter per Day                        |
| mL/m2/h [C73762]        | Milliliter per Square Meter per Hour                       |
| mL/m2/min [C73763]      | Milliliter per Square Meter per Minute                     |
| mL/min [C64777]         | Milliliter per Minute                                      |
| mL/min/1.73m2 [C67412]  | Milliliter per Minute per 1.73 m2 of Body Surface Area     |
| mL/min/mmHg [C67417]    | Milliliter per Minute per Millimeters of Mercury           |
| mL/mmHg [C106542]       | Milliliters Per Millimeter of Mercury                      |
| mL/mmHg/min/L [C67418]  | Milliliter per Minute per Millimeters of Mercury per Liter |
| mL/s [C69073]           | Milliliter per Second                                      |
| mL/s/m2 [C166100]       | Milliliter Per Second Per Square Meter                     |
| mL/sec/1.73m2 [C105505] | Milliliter Per Second Per 1.73 Meter Squared               |
| mL/sec/m2 [*]           | mL/sec/m2                                                  |
| mMU/mL [C132480]        | MilliMerck Unit per Milliliter                             |
| mN [C127809]            | Millinewton                                                |
| mOsm [C67318]           | Milliosmole                                                |
| mOsm/L [C122214]        | Milliosmole per Liter                                      |
| mOsm/kg [C67427]        | Milliosmole per Kilogram                                   |
| mPa [C73765]            | Millipascal                                                |
| mU [C67315]             | Milliunit                                                  |
| mU/L [C67408]           | Microunit per Milliliter                                   |
| mU/g [C122215]          | Milliunit per Gram                                         |
| mV [C67324]             | Millivolt                                                  |
| mV*min [C105512]        | Millivolt Minute                                           |
| mV/sec [C122216]        | Millivolt per Second                                       |

| Unit [CL.UNIT , C71620] |                                                 |
|-------------------------|-------------------------------------------------|
| Permitted Value (Code)  | Display Value (Decode)                          |
| mV2/Hz [C114241]        | Millivolt Squared per Hertz                     |
| mcg/mL [*]              | mcg/mL                                          |
| mg [C28253]             | Milligram                                       |
| mg DNA/kg [*]           | mg DNA/kg                                       |
| mg/L [C64572]           | Microgram per Milliliter                        |
| mg/L FEU [C158291]      | Milligram per Liter Fibrinogen Equivalent Units |
| mg/animal [C73738]      | Milligram per Animal                            |
| mg/cm2 [C124456]        | Milligram per Squared Centimeter                |
| mg/dL [C67015]          | Milligram per Deciliter                         |
| mg/day [C67399]         | Milligram per 24 Hours                          |
| mg/dose [C124457]       | Milligram per Dose                              |
| mg/g/h [C73740]         | Milligram per Gram per Hour                     |
| mg/g/min [C73741]       | Milligram per Gram per Minute                   |
| mg/h [C66969]           | Milligram per Hour                              |
| mg/kg [C67401]          | Milligram per Kilogram                          |
| mg/kg/day [C66976]      | Milligram per Kilogram per Day                  |
| mg/kg/dose [C124458]    | Milligram per Kilogram per Dose                 |
| mg/kg/h [C71362]        | Milligram per Kilogram per Hour                 |

**Computational Algorithms**

| Method                       | Type        | Description                                                                                                                                                                                                                                                                                                                                                |
|------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Algorithm to derive AESHOSP  | Computation | Whether an AE Requires Hospitalization (AESHOSPR) or Prolongs Hospitalization (AESHOSPP) is collected separately on the CRF. When either is 'Y', the variable AESHOSP (Requires or Prolongs Hospitalization) is derived as 'Y'. Otherwise it will be 'N'                                                                                                   |
| Algorithm to derive --BLFL   | Computation | The last record with a non-missing result and non-missing --DTC and having --DTC <= RFSTDTC should have --BLFL =Y. Both date and time or timepoint (as applicable) should be considered when comparing --DTC and RFSTDTC.                                                                                                                                  |
| Algorithm to derive DTHFL    | Computation | When the Death Date (DM.DTHDTC) is populated, the Death Flag (DM.DTHFL) is derived as 'Y'. Otherwise, it will remain blank.                                                                                                                                                                                                                                |
| Algorithm to derive --DY     | Computation | The study day variable --DY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --DTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --DTC or RFSTDTC date is incomplete, --DY is null.         |
| Algorithm to derive --ENDY   | Computation | The study day variable --ENDY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --ENDTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --ENDTC or RFSTDTC date is incomplete, --ENDY is null. |
| Algorithm to derive EPOCH    | Computation | Derived based on start-end dates defined in SE dataset                                                                                                                                                                                                                                                                                                     |
| Algorithm to derive VISIT    | Computation | EX.VISIT=EC.VISIT                                                                                                                                                                                                                                                                                                                                          |
| Algorithm to derive EXADJ    | Computation | EX.EXADJ=EC.ECADJ                                                                                                                                                                                                                                                                                                                                          |
| Algorithm to derive EXDIR    | Computation | EX.EXDIR=EC.ECDIR                                                                                                                                                                                                                                                                                                                                          |
| Algorithm to derive EXDOSE   | Computation | TRIAL SPECIFIC DERIVATION PROCESS SHOULD BE DESCRIBED HERE                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive EXDOSFRM | Computation | EX.EXDOSFRM=EC.ECDOSFRM                                                                                                                                                                                                                                                                                                                                    |
| Algorithm to derive EXDOSFRQ | Computation | EX.EXDOSFRQ=EC.ECDOSFRQ                                                                                                                                                                                                                                                                                                                                    |
| Algorithm to derive EXDOSU   | Computation | TRIAL SPECIFIC DERIVATION PROCESS SHOULD BE DESCRIBED HERE                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive EXENDTC  | Computation | TRIAL SPECIFIC DERIVATION PROCESS SHOULD BE DESCRIBED HERE                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive EXLAT    | Computation | EX.EXLAT=EC.ECLAT                                                                                                                                                                                                                                                                                                                                          |
| Algorithm to derive EXLOC    | Computation | EX.EXLOC=EC.ECLOC                                                                                                                                                                                                                                                                                                                                          |
| Algorithm to derive EXREFID  | Computation | Implementation Instruction: If EXREFID is copied from EC.ECREFID then the METHODS table should contain the description that is relevant for a study:<br>EX.EXREFID= EC.ECREFID or EX.EXREFID= DA.DAREFID                                                                                                                                                   |
| Algorithm to derive EXROUTE  | Computation | EX.EXROUTE=EC.ECROUTE                                                                                                                                                                                                                                                                                                                                      |
| Algorithm to derive EXSTDTC  | Computation | TRIAL SPECIFIC DERIVATION PROCESS SHOULD BE DESCRIBED HERE                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive EXTRT    | Computation | TRIAL SPECIFIC DERIVATION PROCESS SHOULD BE DESCRIBED HERE                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive --NRIND  | Computation | --NRIND is derived for quantitative results as low, normal, high depending on whether are result falls below, within or above the limits of normal respectively. --NRIND is derived for qualitative results as normal or abnormal depending on whether the results fall within or outside a value set of results considered normal                         |
| Algorithm to derive RFENDTC  | Computation | Date of completion or discontinuation from study. RFENDTC is expected to be null when RFSTDTC is null (e.g., screen failures and unassigned subjects)                                                                                                                                                                                                      |
| Algorithm to derive RFICDTC  | Computation | RFICDTC=DSSTDTC when DSDECOD=INFORMED CONSENT OBTAINED. When multiple informed consents are included in DS, this will be the date of the first one.                                                                                                                                                                                                        |

| Method                       | Type        | Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Algorithm to derive RFPENDTC | Computation | RFPENDTC represents the last date of participation for subject for data included in submission. This is the last date of any record for subject in the database at the time it's locked for submission. In case of an interim cut-off, this date will not represent the end of study participation for ongoing subjects. All collected or derived dates in all datasets must be less than or equal to RFPENDTC. |
| Algorithm to derive RFSTDTC  | Computation | Date (and time, if present) of first study agent (drug) treatment excluding run-in period. If more than one study agent is specified per protocol, the earliest of any study agents. Null if subject did not receive any study agent, was a screen failure, or was not assigned to a treatment group.                                                                                                           |
| Algorithm to derive RFXENDTC | Computation | Last date of exposure to any protocol-specified treatment or therapy for the subject in ISO 8601 character format.                                                                                                                                                                                                                                                                                              |
| Algorithm to derive RFXSTDTC | Computation | First date of exposure to any protocol-specified treatment or therapy for the subject in ISO 8601 character format, excluding run-in period.                                                                                                                                                                                                                                                                    |
| Algorithm to derive SEENDTC  | Computation | If Element = SCREEN, derived from SVENDTC where VISIT = SCREENING. If Element = EOS, derived from DS where DSCAT = DISPOSITION EVENT or from the latest EXENDTC from EX whichever is later. For treatment Elements, derived from last EXENDTC for the element. When there are no gaps between Elements, the value of SEENDTC for one Element will be the same as the value of SESTDTC for the next Element      |
| Algorithm to derive --SEQ    | Computation | Sequence number given to ensure uniqueness within a dataset for each subject record                                                                                                                                                                                                                                                                                                                             |
| Algorithm to derive SESTDTC  | Computation | If Element = SCREEN, derived from SVSTDTC where VISIT = SCREENING or from DS where DSDECOD = 'INFORMED CONSENT', whichever is earliest. If Element = EOS, derived from DS where DSCAT = DISPOSITION EVENT. For treatment Elements, derived from first EXSTDTC for the element                                                                                                                                   |
| Algorithm to derive --STDY   | Computation | The study day variable --STDY describes the relative day of the observation starting with the reference date as Day 1. They are determined by comparing the date portion of the respective date/time variable --STDTC to the date portion of the Subject Reference Start Date (RFSTDTC from DM). If --STDTC or RFSTDTC date is incomplete, --STDY is null.                                                      |
| Algorithm to derive --STNRHI | Computation | --STNRHI is calculated by multiplying the --ORNRHI by the conversion factor required to transform the --ORRESU to --STRESU for the given test                                                                                                                                                                                                                                                                   |
| Algorithm to derive --STNRLO | Computation | --STNRLO is calculated by multiplying the --ORNRLO by the conversion factor required to transform the --ORRESU to --STRESU for the given test                                                                                                                                                                                                                                                                   |
| Algorithm to derive --STRESC | Computation | --STRESC= --ORRES in a standard format or standard units                                                                                                                                                                                                                                                                                                                                                        |
| Algorithm to derive --STRESN | Computation | --STRESN= --STRESC when --STRESC contains a continuous numeric result else STRESN will remain blank. If STRESC contains a score or ranking, then --STRESN = --STRESC                                                                                                                                                                                                                                            |
| Algorithm to derive --STRESU | Computation | --STRESU=--ORRESU or a Standardized unit assigned.                                                                                                                                                                                                                                                                                                                                                              |
| Algorithm to derive SVENDTC  | Computation | SVENDTC = SVSTDTC for visit occurring within one calendar day. For visit occurring over several physical visits and/or over several days, then SVENDTC = last date for that visit                                                                                                                                                                                                                               |
| Algorithm to derive TSSEQ    | Computation | Sequence number given to ensure uniqueness within a dataset for each TSPARMCD                                                                                                                                                                                                                                                                                                                                   |
| Algorithm to derive EXLOT    | Computation | Assigned via unblinding process                                                                                                                                                                                                                                                                                                                                                                                 |
| Algorithm to derive USUBJID  | Computation | The USUBJID variable contains the concatenation of STUDYID - SUBJID as defined on the trial CRF. Sometimes, subjects may participate in more than 1 trial. Subjects enrolled in a primary study and then followed into an extension or followup study should retain their unique identifier from the first study.                                                                                               |

| COM.IETESTCD       | See Study Data Reviewers Guide for full criterion text                                                                                                                                                                                                                                                                                                                                                 |
| COM.RFPENDTC       | RFPENDTC should always be populated for all subjects in all on-going transfers. In a cut-data deliverable, RFPENDTC should be re-derived based on data present after data cut.                                                                                                                                                                                                                         |
| COM.RFXENDTC       | RFXENDTC should be populated only after a subject has completed or withdrawn from treatment. In most trials this is signaled by the completion of the Treatment Disposition eCrf. RFXENDTC = NULL if a subject is still continuing treatment. In a cut-data deliverable, if RFXENDTC for a subject happens to fall after the date of the data cut, then RFXENDTC should be made null for that subject. |
| COM.LB-JOIN-SUPPLB | Join LB and SUPPLB datasets based on USUBJID, IDVAR and IDVARVAL                                                                                                                                                                                                                                                                                                                                       |
| COM.LBTOX          | The Toxicity code list values should be based on the toxicity scale used in a trial. Trial teams should assign the correct codelist applicable to the scale being used in their trial metadata.                                                                                                                                                                                                        |
| COM.LBTOXGR        | The Toxicity code list values should be based on the toxicity scale used in a trial. Trial teams should assign the correct codelist applicable to the scale being used in their trial metadata.                                                                                                                                                                                                        |
